Capture reality on your terms
The GLS-2000 series of scanners is comprised of three comparable, yet distinct models: the GLS-2000S (short-range), GLS-2000M (medium-range), and GLS-2000L (long-range). Each model is a full-featured scanner that can be effectively deployed to capture existing, as-built conditions based on the measurement range requirements of the application. The innovative capabilities of the GLS-2000 combined with its field rugged design, provides users with a purposeful solution that will stand up to the most extreme work environments.

Versatile and adaptable
The GLS-2000 offers quick, simple and effective ways of capturing 3D point cloud data at high-speed without sacrificing the accuracy desired by today’s demanding professionals. With one-button to start scanning, on-board enabled occupation and backsight orientation, and combined with ScanMaster software – the GLS-2000 portfolio provides a solution suited to any industry professional wanting the most value from their scanning investment.

Dual cameras – wide-angle and zoom
The GLS-2000 is equipped with dual 5 megapixel cameras – the 170° wide-angle camera obtains images at high speed while the 8.9° telephoto camera is coaxial with the measuring axis.

Precise Scan Technology II
With three times faster (time-of-flight) pulse signals compared to previous GLS models, the GLS-2000 produces a clear signal waveform enabling more precise signal processing. Employing an ultra high-speed ADC (analog-digital converter) along with a newly developed direct sampling technique, Precise Scan Technology II enables signal extraction resulting in reduced noise and high accuracy data.
Standard Topcon tribrach

Built-in Wi-Fi

Internal cameras

Rotating selectable laser

On-board one-touch scanning

TSshield™ ready

On-board batteries

SD card slot

Standard Topcon tribrach
ScanMaster

Complete, full-featured 3D point cloud software package that includes all tools for processing, editing, and delivering point cloud data from your Topcon GLS-2000 laser scanner.

Processing point cloud data
After field work is complete, ScanMaster supports importing, viewing, and cleaning of collected point cloud data – providing multiple tools for registering, then geo-referencing to survey control.

Extracting objects
Tools for creating and editing objects such as polylines, meshes, edges, and planes are easily accessed. The region selection tool is especially useful for isolating surfaces such as roadways and building walls, floors, and ceilings.

Export to industry applications
Exporting clouds or objects to third-party design and analysis applications is simple. Many of today’s most popular applications can directly accept the Topcon (.cl3) point cloud format, making workflows even more streamlined.
